The PCI Security Standards Council’s PCI DSS Requirement 11.2.2 mandates that merchants must conduct an external network security scan with a PCI approved solution. The network scan must pass, at a minimum, once every ninety days. These network scans are facilitated by Approved Scanning Vendors (ASVs). ASV is an organization with a validated vulnerability scanning service that adheres to the external scanning requirements of PCI DSS Requirement 11.2.2. The scanning vendor’s ASV scan solution is tested and approved by PCI Security Standards Council (SSC).

**MANAGED APPROVED SCANNING VENDOR (ASV) SERVICE**

- Tests external network security and protection of your cardholder data environment
- Unlimited re-scans to ensure remediation efforts are effective and pass status doesn’t change
- Threat intelligence and signature updates to scanning technology based on multiple security sources
- Review of scan results by certified cybersecurity analysts
- Scan results provided for Pass/Fail with details on recommended remediation as necessary
- Pass Report with ASV Certification number available and archived to support PCI Compliance Program
VULNERABILITY MANAGEMENT

ASV scanning services are part of SageNet’s Vulnerability Management services. Utilizing Clone Guard for PCI Compliance Scanning, our goal is to evaluate the current status of information systems and applications against known vulnerabilities, identify technical gaps, and provide a report to assist with remediation.

- Approved Scanning Vendor (ASV) external scanning services to satisfy PCI DSS requirement 11.2.2.
- Internal scanning service
- Initial scanning configuration and scheduled set-up
- Vulnerability reporting with remediation recommendations and, when appropriate, Attestation of Scan Compliance reporting

MANAGED SECURITY SERVICES

SageNet’s security services offering delivers effective and affordable security consulting and operational services for our customers to help them achieve not only the minimum standard industry compliance, but also a mature security program following a best-practices security framework. The broad range of cybersecurity solutions and services are delivered by a team of highly trained, certified and experienced cybersecurity professionals.

For those operations that require around the clock attention, SageNet’s U.S.-based Network Operations and Security Operations Centers (NOCs and SOCs) provide ongoing services for continuous security event monitoring, investigation, and security solution management. SageNet has listened to industry feedback of managed SIEM and SOC vendors and has evolved our service with the goal to deliver real value to our customers, resulting in receiving contextual alerts & escalations of security events, valuable reports, ongoing tuning of the SIEM, and an overall customized security services experience.

Building and maintaining a security program is difficult. SageNet can help. Whether choosing to outsource or co-source your security operations, SageNet’s security team is here to support your business needs as you build and maintain a robust, mature information security program.

Why Select SageNet as Your Managed Security Services Partner?

SageNet is a relationship-driven leader in managed network and cybersecurity services. We connect, manage and protect technologies and devices across the enterprise. SageNet delivers creative solutions built on an integrated cybersecurity framework and best-of-breed technology from industry-leading partners.

We offer world-class service and support via three US-based 24/7 Network Operations Centers (NOCs) and Security Operations Centers (SOCs), geographically-diverse teleports, a central National Logistics Center, three national data centers, and a nationwide field service organization.

With a three-decade track record in managed services, SageNet boasts a long-term customer base that includes the nation’s largest retail, healthcare, financial, utilities and energy organizations. We manage communications at more than 220,000 endpoints.
