

ALEX BARCLAY

SageNet, Portfolio Product Manager

Alex Barclay brings more than 10 years of experience in IT security and development of wholistic security programs to his work as a product manager for SageNet's cybersecurity division. He helps customers mature their security posture and reduce risk by addressing the managerial, operational and product aspects of their entire security process.

Previous Experience

eLynx Technologies, Chief Information Security Officer

- In his role at eLynx Technologies, a high-growth IIOT oil and gas company, Alex implemented a business-wide security program based on SANS Critical Security Controls and NIST Cyber Security Framework. With an eye toward development and product management, he designed security controls, policies, processes and procedures to pass SSAE18 SOC2 type 2 audit and designed processes to document and manage risk internally – including development of threat monitoring/intelligence capabilities for the company.

Oracle Systems, Inc., Principal Product Manager (Solaris + Systems Security)

- Alex served as the product manager for Oracle's Solaris + Systems Security as well as product manager for Oracle's entire hardware systems security, which represented a \$3.5 billion product portfolio. Major initiatives he helped coordinate include:
 - Co-architecting integrated compliance reporting
 - Initiating and providing guidance for external security evaluations across product lines
 - Revision of security assurance development standards
 - Creation of cross product line security architectures

Topics Alex can speak on

- Security topics (big data, high performance computing, different clouds)
- Security and compliance management

Alex has extensive expertise in the following industries:

- Security and compliance

About SageNet

SageNet is passionate about trusted connections. The company believes that by creating, discovering and nurturing trusted connections with its customers, associates and community, SageNet enhances the world that connects us all.

As a leader in managed network and cybersecurity services, SageNet connects, manages and protects technologies and devices across the enterprise. The company offers world-class service and support via its three US-based 24/7 Network Operations Centers (NOCs) and Security Operations Centers (SOCs), geographically-diverse teleports, a central National Logistics Center, multiple data centers, and a nationwide field service organization.

With a three-decade track record in managed services, SageNet boasts a long-term customer base that includes the nation's largest retail, healthcare, financial, utilities and energy organizations. SageNet manages communications at more than 220,000 endpoints. Headquartered in Tulsa, SageNet has regional offices in Washington, D.C., Atlanta, Chicago and Philadelphia.

*Security and compliance are complementary. Security is about reducing risk.
Compliance is about achieving objectives. Here at SageNet, we have a lot of
experience developing a framework that incorporates both of those. We make sure
it's not just security – it's security plus compliance plus a wider portfolio view of
those two being baked into everything we do for you, not expensive add-ons.
We believe it should be secure by default.*
