

BEN DOANE

Director of Cybersecurity Business Development

Ben Doane has spent more than a decade delivering cybersecurity and digital intelligence solutions to companies seeking ways to protect their vital data and to understand the ever-increasing number of security threats impacting their business.

Previous Experience

Business Development & IT Consulting, Turnberry Solutions

- Ben oversaw business development and IT consulting at this Philadelphia-based company, delivering a range of security solutions to a wide variety of corporations through the convergence of cloud, big data, cybersecurity, and managed services.

Topics Ben can speak on

- Corporate cybersecurity
- EDR, MDR, XDR
- Security awareness for employees (people working outside physical walls, how to educate employees and security)
- Testing and hardening systems
- The importance of visibility into a company's data

About SageNet

SageNet is passionate about trusted connections. The company believes that by creating, discovering and nurturing trusted connections with its customers, associates and community, SageNet enhances the world that connects us all.

As a leader in managed network and cybersecurity services, SageNet connects, manages and protects technologies and devices across the enterprise. The company offers world-class service and support via its three US-based 24/7 Network Operations Centers (NOCs) and Security Operations Centers (SOCs), geographically-diverse teleports, a central National Logistics Center, multiple data centers, and a nationwide field service organization.

With a three-decade track record in managed services, SageNet boasts a long-term customer base that includes the nation's largest retail, healthcare, financial, utilities and energy organizations. SageNet manages communications at more than 220,000 endpoints. Headquartered in Tulsa, SageNet has regional offices in Atlanta, Chicago, Philadelphia, Toronto and Washington, D.C.

Today, a corporation's footprint is beyond the walls of the office – we live in a mobile digital world. You have to think how you are securing your endpoints and all corporate data as employees work from anywhere. It's critically important to be secure online and leverage strategic partnerships so that you have the people, technology and processes in place to minimize your risk.
